

## OVERVIEW

This new intercontinental high speed EMU combines long-distance passenger and freight transportation and is designed for travel across continents. This new product is adapted to suit various climates and environments, as well as different railway systems and standards. The intercontinental train presents an opportunity for more efficient, safer and greener freight transportation, while the innovative interior offers passengers a luxurious and comfortable environment for long distance travel.

# A NEW CONCEPT FOR INTERCONTINENTAL RAIL TRAVEL

The optimal way to travel across continents

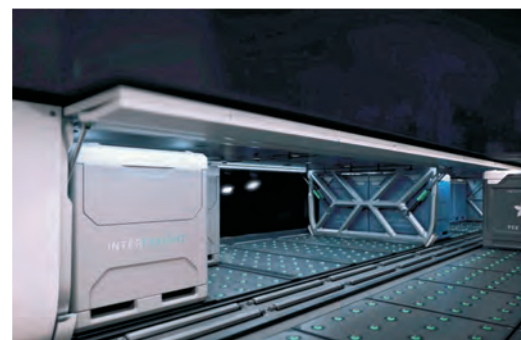

## MAIN FEATURES

### ▶ AN OPTIMAL CONFIGURATION: COMBINING PASSENGER TRAVEL AND FREIGHT TRANSPORTATION

This double-decker train features an innovative configuration to optimize both passenger and freight transportation across continents. The top deck is designed for passenger use, while the lower deck is designed for freight transportation. The streamlined train design offers a striking visual impact, and meets the aerodynamic requirements of a train destined to travel at high speeds.

### ▶ HIGH ADAPTABILITY

The intercontinental train can operate at high speeds across a range of harsh climatic conditions and environments, both over long distances and for shorter periods. It has also been designed to be adaptable to the varying connection and communication systems of different railway infrastructures as it travels through different countries.

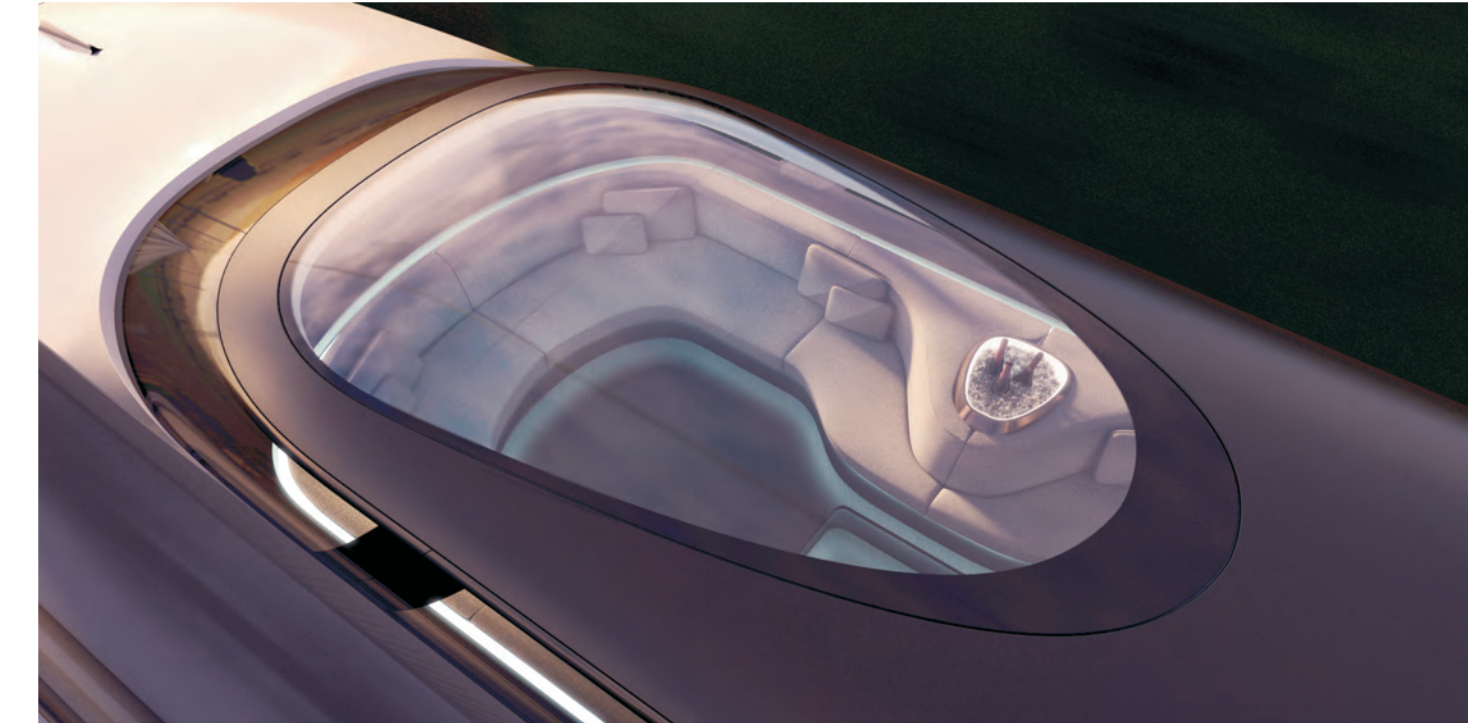

### ▶ OUTSTANDING PASSENGER EXPERIENCE

The layout of the passenger compartments is inspired by luxury air travel and high end contemporary hotel interiors. The interiors provide a bright and spacious environment. Ergonomic suite-like seats offer passengers an enhanced and more comfortable travel experience.

### ▶ OPTIMAL SOLUTION FOR FREIGHT

The automated freight system is set to revolutionize the way goods are stored and transported. The system is a greener, faster, more efficient and more cost-effective way to transport goods over long distances.

## COMMERCIAL VALUE AND MARKET PERFORMANCE

The market for passenger and freight transportation across continents is significant, especially as the need to develop greener travel solutions continues to increase all around the world. Passengers today are discerning and require products that are both luxurious and eco-conscious, while demand for faster, more efficient ways to transport goods continues to rise. The intercontinental train is set to start a new era for lifestyle travel and goods transportation and will present you with vast opportunities, as well as open up new markets.
